### Mounting

- a. Mounting Panel
- b. Lug / Wire
- c. Mounting Nut
- d. Lock Washer
- e. Electrode Lug Nut

### Installation Torque Recommendations

**NOTE:** Electrode Nuts (e) must be tightened using the Two-Wrench Method...Place an open end wrench on the electrode nut closest to the mounting panel (a) and a calibrated torque wrench on the outer electrode nut on the same side...Tighten nuts against one another.

The “two wrench method” will prevent any torque from developing between the electrode and the HPR body.

Electrode Lug Nut (e) Torque: 70 in-lbs (8 N·m)

Mounting Panel Nut (c) Torque: 100 in-lbs (11 N·m)

### Part Number

Device	Current	Capacitance	Tolerance	Voltage	Series
HPR	140	XXXX	X	XX	X

**Device** HPR High Current Feedthrough Filter

**Current** Current rating in amperes

**Capacitance** in picofarads, first two digits are significant, last two digits are number of zeros  
e.g. 2203 = 22,000pF / 4704 = .47μF

**Tolerance** Capacitor Code: Z= +80%/-20% (Standard), M= +/-20%, K= +/-10%, J=+/-5%

**Voltage** Rating Code: 05=50V, 10=100V, 20=200V, 50=500V, 1K=1000V, 1A=120Vac, 2A=240Vac

**Series** Optional series designator

**Example:** HPR1401004Z10 = Feedthrough Filter / 140A / 0.10uF / +80%/-20% / 100Vdc

### Safety Tips

- ✓ The filter should be mounted in a grounded shielding panel
- ✓ Tighten the electrode nuts to the torque specified with the two wrench method
- ✓ Cover exposed electrode nut
- ✓ Observe temperature, current, & voltage limits
